KAREN BAUSMAN **BACKGROUND**

Architect, Artist, Theorist

Karen Bausman occupies a singular position at the intersection of architecture, visual art, and urban theory, maintaining a practice in which each discipline continually informs and expands the others. A graduate of The Cooper Union School of Architecture (B.Arch 1982), she is a designer whose work combines rigor with civic engagement, earning recognition from leading institutions while sustaining an independent practice defined by intellectual ambition and civic purpose.

Her thesis project, *One-Way Bridge*, was selected while she was still a student for inclusion in the Express Network Gallery's *Model Citizens Against Post Modernism* and was later published by Rizzoli in *Education of an Architect*. Decades later, it was featured in *Archive and Artifact: The Virtual and the Physical*, a Cooper Union exhibition highlighting thesis work by many of the school's distinguished graduates. The project also remains part of Cooper Union's permanent digital archive, reflecting its enduring relevance.

Her honors reflect recognition across both professional practice and architectural education. In 1994, she received the Rome Prize, followed that same year by The Cooper Union President's Citation of Outstanding Contributions to Architecture and appointment to the Eero Saarinen Chair at Yale University's School of Architecture. In 2001, Harvard University's Graduate School of Design named her the Eliot Noyes Visiting Design Critic in Architecture, one of the discipline's most distinguished chairs in architecture education.

New York City designated her as a Design Excellence architect twice, in 2005 and 2010, qualifying her firm, Karen Bausman + Associates, to compete for many of the city's most significant public commissions. In 2022, the New York Landmarks Conservancy honored her firm with the Lucy G. Moses Preservation Award for Highbridge Tower & Step Street, a major civic infrastructure project for the City of New York.

Bausman's parallel life as a visual artist is equally accomplished. Since participating in a Public Art Fund exhibition in 1983, she has exhibited drawings, sculpture, and site-specific installations throughout New York City. Early works include *Seasightings* (1985), a waterfront installation for Creative Time in Battery Park City, and *The London Project* (1988), presented at Artists Space and published by Princeton Architectural Press /Artists Space. A fellowship from the New York Foundation for the Arts supported her collaboration with filmmaker Patricia Pillette on *Greenwich*, a "metaphysical timescape" later presented at MIT's List Visual Arts Center. In 1991, a New York Times feature on her private sculptural commission, *Constellation Screen*, at the Cooper-Hewitt National Design Museum, led to a commission from the paper in 1994 for *Seed Money*, a visual exploration of the U.S. Treasury's proposed currency redesign. In 2008, the New York Foundation for the Arts provided fiscal sponsorship for *The Wall Project*, a proposal for a monumental earthwork evoking Lower Manhattan's pre-colonial topography.

Her most recent work, *NYC Future Perfect* (2026), brings architecture, art, and urban research together in a proposal for a new class of lightweight, modular, robotics-fabricated civic structures powered by wind turbines integrated into their façades. Conceived for recreation, field operations, and community use across all five boroughs, the project explores how emerging technologies can advance climate-responsive urban design. As Bausman has observed, "My architectural work has always exploited the boundaries between built, graphic and sculpted form. It's been an organic movement from architecture into a space outside conventional disciplinary and institutional boundaries, in service of how new technologies can be integrated into climate-responsive urban design."

NYC Future Perfect was featured in *Making Energy Visible* at the Center for Architecture in New York (October 3, 2025–March 28, 2026), a group exhibition supported by the Graham Foundation for Advanced Studies in Fine Arts, the New York State Council on the Arts, and the New York City Department of Cultural Affairs. The project continues to serve as a platform for Bausman's ongoing research into renewable energy, robotic fabrication, and resilient civic infrastructure.
